

MODULE 1: PATIENT INSTRUCTION & DIET SHEETS

YOUR JOURNEY TO RECOVERY: A PATIENT'S GUIDE TO SURGICOVER

Specialized Peri-Operative Nutritional Therapy Marketed by Sparrow Pharmaceuticals

Dear Patient,

Welcome home! Having surgery is a major milestone, and the days following your procedure are some of the most important for your long-term health. Right now, your body is working incredibly hard behind the scenes. It is clearing away damaged cells, rebuilding deep tissues, and knitting your skin back together.

To do this demanding work, your body's "metabolic engine" is running at a much higher speed than usual. It requires specialized, high-purity raw materials to heal efficiently, preserve your strength, and protect your muscles.

To support you through this vital phase, your surgical team has prescribed **Surgicover**. This is not a standard dietary supplement; it is a clinical, medical-grade immunonutrition formula specifically designed to fuel your recovery at the cellular level. This guide will help you understand why Surgicover is so important to your healing and show you how to easily and safely build it into your daily routine.

CLINICAL INSIGHT: WHY YOUR SURGEON PRESCRIBED SURGICOVER

Understanding the Difference Between Medical Nutrition and Standard Gym Proteins

During your recovery, it might be tempting to think that any over-the-counter protein powder from a local gym or grocery store will do the same job. However, standard fitness proteins are formulated for healthy athletes looking to build bulk muscle, whereas your body is currently healing from surgical trauma.

Your surgeon selected **Surgicover** because it meets strict medical requirements that standard gym proteins simply cannot match:

1. Optimal Blood Sugar Control (Zero Added Sugar)

- **The Clinical Reality:** In the days following surgery, your body naturally experiences temporary insulin resistance, which can cause your blood sugar to spike unexpectedly. Standard fitness protein powders frequently contain high amounts of added sugars, maltodextrin, or heavy corn syrups to improve flavor. These sugars can cause rapid blood glucose spikes, which directly impair your immune system, slow down wound healing, and increase your risk of post-operative infections.
- **The Surgicover Advantage:** Surgicover is strictly formulated with **Zero Added Sugar (Sucrose)**. It uses a safe, non-nutritive sweetener (sucralose) to provide a pleasant taste without affecting your blood sugar, keeping your glycemic levels stable and protecting

your healing tissues.

2. Gentle on a Sensitive Digestive System

- **The Clinical Reality:** Anesthesia, post-operative pain medications, and antibiotics can slow down your digestive tract, making your stomach highly sensitive. Standard gym proteins are often heavily concentrated with whey concentrates or lactose, which can trigger painful bloating, gas, stomach cramps, or diarrhea.
- **The Surgicover Advantage:** Surgicover is formulated with an ultra-low lipid profile (**only 0.19g of Fat per 20g serving**). This exceptionally low fat content allows the supplement to clear your stomach rapidly, reducing post-operative nausea. Additionally, its balanced, highly refined protein matrix is designed to be gentle on your digestive tract, minimizing stomach distress.

3. Pharmaceutical Purity and Safety

- **The Clinical Reality:** Standard athletic protein powders are classified as general dietary supplements and do not undergo stringent medical-grade safety testing. Independent laboratory tests have revealed that many popular retail protein powders contain trace amounts of environmental toxins, including heavy metals (such as lead, arsenic, and cadmium), chemical plasticizers (BPA), and pesticide residues.
- **The Surgicover Advantage:** Surgicover is manufactured under strict quality controls by Sparrow Pharmaceuticals. Every batch is verified for chemical purity, ensuring that you are consuming a clean, safe, and toxin-free medical product during your vulnerable recovery period.

4. Targeted Recovery and Tissue Repair Enrichment

- **The Clinical Reality:** Gym proteins are designed solely for general muscle maintenance. They do not contain the specialized micro-ingredients required to rebuild blood vessels, lay down collagen, or fight inflammation.
- **The Surgicover Advantage:** Surgicover is enriched with a targeted, medically calibrated formulation of amino acids, vitamins, and minerals that standard protein powders lack:
 - **L-Arginine (200mg per serve):** A vital amino acid that your body cannot make enough of during recovery. It stimulates the production of nitric oxide, which widens micro-blood vessels to deliver oxygen and nutrients directly to your incision site. It also acts as a primary building block for collagen, helping to close your wound securely.
 - **L-Leucine (100mg per serve):** A specialized amino acid that acts as a direct chemical signal to your muscles. It helps prevent your muscles from breaking down during periods of bed rest and physical inactivity.
 - **Collagen-Building Minerals:** Precise doses of **Manganese (0.50mg)**, **Iron (2.40mg)**, and **Copper (0.32mg)** work as essential cofactors to stabilize and strengthen newly forming skin and tissue.
 - **Vitamin C (32.0mg):** Crucial for giving newly formed collagen fibers their physical strength, preventing your wound margins from separating.
 - **Vitamin B12 (0.32mcg):** Supports the rapid production of red blood cells to keep oxygen flowing to your healing tissues.

CULINARY CUSTOMIZATION: HOW TO PREPARE YOUR SURGICOVER

3 Nutrient-Rich, Smooth, and Safe Recipes

To preserve the delicate structure of Surgicover's high-quality proteins and protect its heat-sensitive vitamins (such as Vitamin C and B-complex vitamins), **never add Surgicover directly to boiling or extremely hot liquids.**

Exposing the dry powder directly to high heat above 60°C causes the proteins to "cook" and denature instantly. This creates a water-resistant barrier around the powder, resulting in hard, sticky lumps that cannot be dissolved. High temperatures also degrade vital vitamins, reducing their nutritional value.

To enjoy a perfectly smooth drink while keeping all nutrients fully active, use these three recovery-friendly preparation methods:

Recipe 1: The Healing Warm Oats

A comforting, warm breakfast that naturally complements the dry fruits flavor of Surgicover.

1. Cook a portion of traditional, unsweetened rolled oats in water or milk according to your preference.
2. Remove the cooked oats from the stove or microwave and transfer them to a serving bowl.
3. Let the oats cool for a few minutes until they are warm but safe to touch (the temperature must be under 50°C , or $T < 50^{\circ}\text{C}$).
4. In a small cup, mix **one serving (20g)** of Surgicover powder with **50mL of room-temperature liquid** (water or milk), stirring thoroughly with a spoon to create a smooth, runny paste.
5. Gently pour this pre-mixed Surgicover paste into your warm oats, stir well until fully blended, and enjoy.

Recipe 2: The Creamy Dry-Fruits Hydration Shake

A refreshing, cold shake that hydrates your body and provides smooth, lump-free nutrition.

1. Pour **200mL of cold liquid** (such as chilled water, skimmed milk, or unsweetened almond milk) into your protein shaker bottle. For best results, use cold liquid between 4°C and 10°C ($T = 4^{\circ}\text{C}$ to 10°C). **Tip for success: Always add the liquid first, before the powder.**
2. Add exactly **one serving (20g)** of Surgicover powder on top of the liquid.
3. Drop in the wire mixing ball, close the lid tightly, and shake vigorously for **30 seconds**.
4. **The Secret Step:** Place the shaker bottle on the counter and let it rest undisturbed for **60 to 90 seconds**. This short rest allows the soy and milk protein molecules to fully absorb the liquid, eliminating any "chalky" texture.
5. Give the bottle one quick, final 10-second shake and drink immediately. For an extra treat, your caregiver can sprinkle a pinch of finely crushed almonds on top to highlight the natural dry fruits flavor.

Recipe 3: The Gentle Warm Elixir

A soothing, warm drink that provides a comforting, aromatic dry fruits experience.

1. Heat **150mL of water or milk** to a boil, pour it into a mug, and allow it to cool until it is comfortably warm to the touch (temperature must be under 50°C , or $T < 50^{\circ}\text{C}$).
2. In a separate cup, combine **one serving (20g)** of Surgicover with **30mL of room-temperature water or milk**, stirring to form a thick, uniform paste.
3. Slowly pour the cooled, warm liquid from your mug into the paste while stirring continuously in a circular motion until the powder is completely dissolved.
4. Sip slowly and enjoy the relaxing, warm dry fruits aroma.

IMPORTANT SAFETY & ALLERGEN INFORMATION

To ensure your recovery is safe and uncomplicated, please carefully review the allergen indicators before using this product:

- **Soy Allergy Warning:** Surgicover contains **Soya Protein Isolate** and **Defatted Soya Flour**. This product is strictly contraindicated (must not be used) if you have a known clinical allergy to soy or soy-derived products.
- **Dairy and Lactose Warning:** This formulation contains **Skimmed Milk Powder**. If you have a severe dairy allergy or extreme lactose intolerance, please consult your physician before starting Surgicover.
- **Sucralose Tolerability:** This product is sweetened with sucralose to keep it sugar-free and protect your blood sugar. If you have a highly sensitive digestive system, you may notice mild gas or a slight change in stool consistency during the first 2 to 3 days of use as your body adjusts.
- **When to Contact Your Doctor:** While Surgicover is highly refined and safe, your caregiver should monitor you closely. Discontinue use immediately and contact your doctor or seek emergency medical attention if you experience any signs of an allergic reaction, such as:
 - Sudden skin rashes, itching, or hives.
 - Swelling of the lips, face, tongue, or throat.
 - Difficulty breathing or wheezing.
 - Severe, persistent abdominal pain or vomiting.

SURGICOVER NUTRITIONAL DOSAGE CHEAT SHEET

Keep these numbers handy for your daily dietary tracking:

- **Serving Size:** 20g (approx. 1 scoop)
- **Calories per serving:** 75.64 Kcal
- **Carbohydrates per serving:** 15.94g
- **Protein per serving:** 6.0g [30%]
- **Fat per serving:** 0.19g
- **L-Arginine content:** 200mg per serving (1000mg per 100g)
- **L-Leucine content:** 100mg per serving (500mg per 100g)

Always follow the specific preparation, dosage, and timing instructions provided by your surgeon

or clinical dietitian.
